EDUCATION

UNIVERSITY OF CALIFORNIA, IRVINE

Bachelor of Science in Computer Science

Irvine, CA

2023 - 2025

MOORPARK COLLEGE

Associate of Science in Mathematics, Computer Science

Moorpark, CA

2021 - 2023

PROFESSIONAL EXPERIENCE

HONEYDEW SLEEP

Camarillo, CA

Software Engineer, Operations

Feb 2026 - Present

- Built and maintain an internal order-entry web app (React, Vite) used daily by 3 operations staff, cutting order-entry errors by 70%; includes a token-verifying API layer that keeps vendor credentials server-side behind Google OAuth, rate limiting, and CORS allowlisting.
- Extended the tool across the fulfillment workflow: client-side PDF packing lists, a SKU-translation layer, per-partner EDI 850 sync, as well as audit logging for failure recovery and transparency.
- Eliminated manual box counts across 10 SKUs by scheduling a job that classifies boxes by dimension from ShipStation data and posts ERP adjustments for 50+ shipments/week.
- Designed a direct browser-to-GCS video upload pipeline using signed URLs, replacing a 30MB-capped Shopify form and raising the customer submission ceiling to 500MB.
- Sole technical owner of a national retailer's integration onboarding, from specification review to production cutover in 6 weeks.

KPFF ENGINEERING

Los Angeles, CA

Software Engineering Intern

Spring 2025

- Built a cross-platform structural visualization tool (Python, Godot) reducing simulation load times from minutes to seconds for a team of ~50 engineers.
- Collaborated with a 3-person team to define architecture, assign tasks, and deliver MVP in 8 weeks.
- Designed and owned the UI/UX end-to-end, building a multi-screen interface with custom controls tailored to structural engineering workflows, reducing reliance on external documentation.

DTS PLAY-FI

Calabasas, CA

Quality Assurance Intern

Summer 2022

- Identified, documented, and reported over 20 critical-level bugs across the Play-Fi software suite.
- Accumulated over 250 hours of hands-on experience, working closely with iOS, Android, and Google TV operating systems.

TECHNICAL PROJECTS

Weather Visualization App

2026

- Built a full-stack weather app with React and Spring Boot, displaying real-time data on an interactive Leaflet map with city markers driven by latitude/longitude.
- Integrated the OpenWeather API with server-side caching in PostgreSQL (via JPA/Hibernate) and TTL-based freshness checks, reducing redundant external API calls.
- Containerized PostgreSQL with Docker and exposed RESTful API endpoints consumed by the React frontend.

Search Engine

2025

- Designed and built a web search engine, covering crawling, indexing, and query processing.
- Implemented disk-based indexing for 50,000+ pages with partial merges to efficiently optimize RAM usage.
- Improved ranked results from a query via TF-IDF and weights, maintaining response times under 300ms.

Unix Shell

2024

- Developed a custom Unix shell in C, applying advanced programming concepts, utilizing the management of processes, file accessing, and inter-process communication.
- Integrated I/O redirection and piping features, facilitating complex chaining of commands, along with signal handling for reaping. Execution of both foreground and background processes simultaneously.

SKILLS

- Frontend: React, JavaScript, TypeScript, HTML/CSS, Vite
- Backend: Python, Node.js, C++, Java, Spring Boot, SQL, PostgreSQL, SQLite, REST APIs
- Tools: Git, Docker, Bash, AWS, Google Cloud, Vercel, Supabase, Jira, Figma
